EUL 2021

In order to comply the point 2.5.4.C of the ASC Trout Standard Version 1.2, our company makes a public disclosure of “The Estimated Unexplained Lost” EUL for the first 2 months of 2021:

EUL = (stocking count 31.12.2020) - (harvest count) - (mortalities) - (recorded escapes) – (stocking count 28.02.2021).

EUL: 10049* fishes

* There are no recorded escapes. These 0,6% of deviation might be due to the daily manual counting error of mortality, especially in the eggs and small fingerling counting. And also because of the predators.
